

INTEGRATED SUPPORT

Customized to fit your business

Your system is customized to fit your unique business goals. Your services should be customized too. With ATS' Integrated Support, you can mix and match offerings from our eight service products to better achieve your goals. Combining service offerings leads to higher impact, so you can reach your targets more quickly. It's a holistic approach that could save you time and money. You could even see positive results you weren't expecting.

Available Services:

Production Performance Assessment

Spares Management

Planned Preventive Maintenance

Training

On-Site Support

Remote Support

System Upgrade & Retrofit

Performance Monitoring & Health Management

Integrated Support

Description:

Mix and Match

ATS gives you full control over the services you choose for your Integrated Support package. Whether you're purchasing a new system, relocating, or boosting performance, we believe your services should be customized. The examples below provide suggestions for packaged services, and how they could benefit your business. Don't see a package that fits your current needs? You can work with an ATS representative to create your own.

Higher Production

We can help you achieve higher production targets by focusing on human factors. Having the right people, with the right skills, available when you need them makes all the difference. With the proper training, expert support, and performance monitoring, we'll boost your productivity.

Services could include:

- Training
- Remote Support
- On-Site Support
- Performance Monitoring & Health Management

Higher Uptime

When it comes to system faults, we can do more than provide emergency support. If your system faults are causing excessive downtime, we'll help you remedy issues and increase uptime with preventive services.

Services could include:

- Production Performance Assessment
- Spares Management
- Planned Preventive Maintenance
- Performance Monitoring & Health Management

Life Extension

Modifying an existing system can reduce costs and lead times, especially when compared to purchasing a new system. With ATS services, you can reduce downtime and lower your risks associated with obsolescence and aging machinery.

Services could include:

- Production Performance Assessment
- Obsolescence Analysis
- System Upgrade & Retrofit
- Performance Monitoring & Health Management

Higher OEE and output	Higher OEE and output	Optimal budget and resource planning
Reduced lead time	Optimal budget and resource planning	Longer useful life
