**SYMPHONI**™  
ORCHESTRATED MOTION. POWERFUL RESULTS.

# Symphoni™ Transforming Assembly Automation

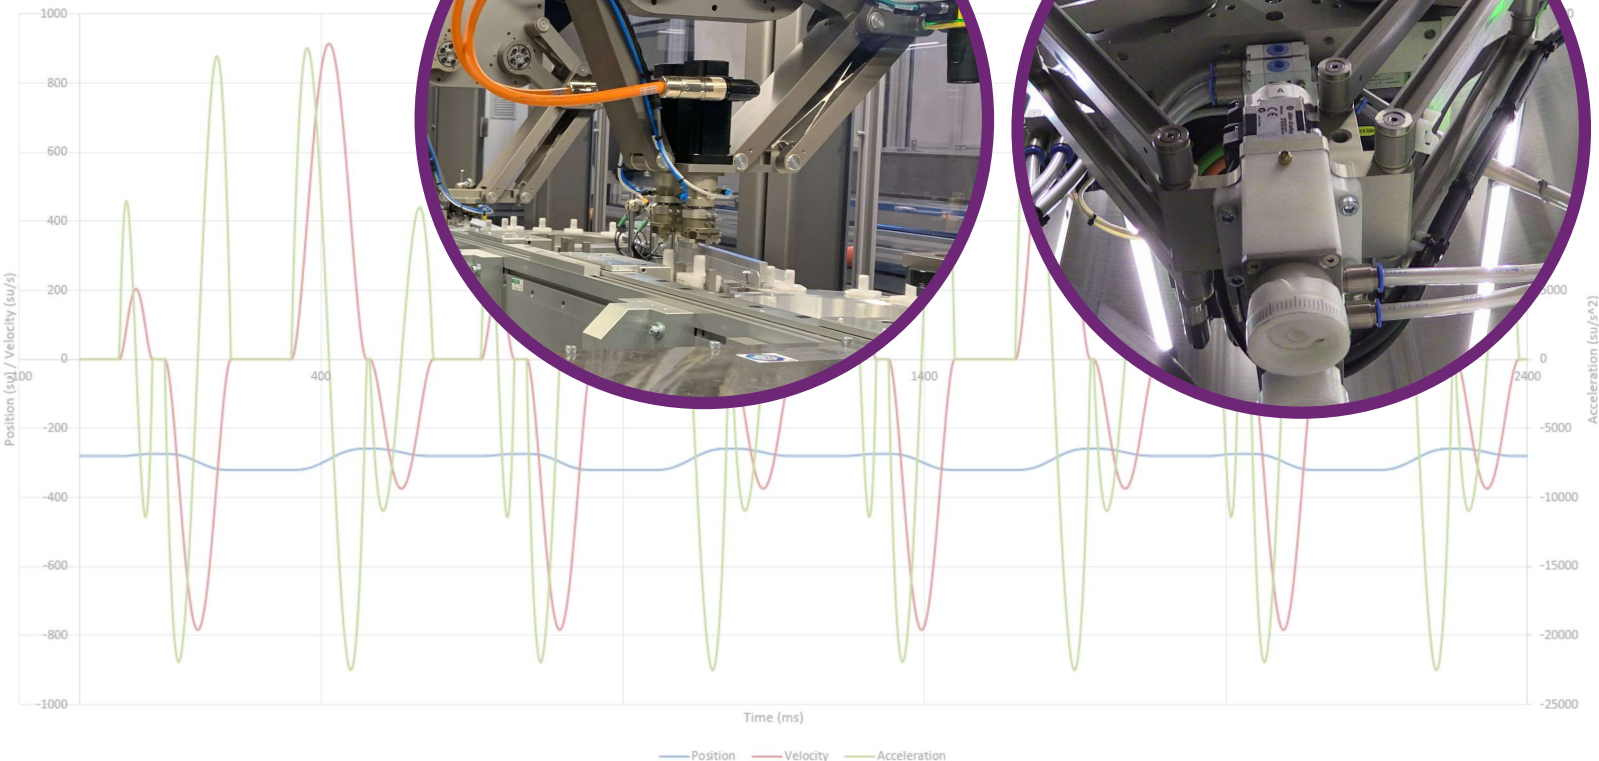

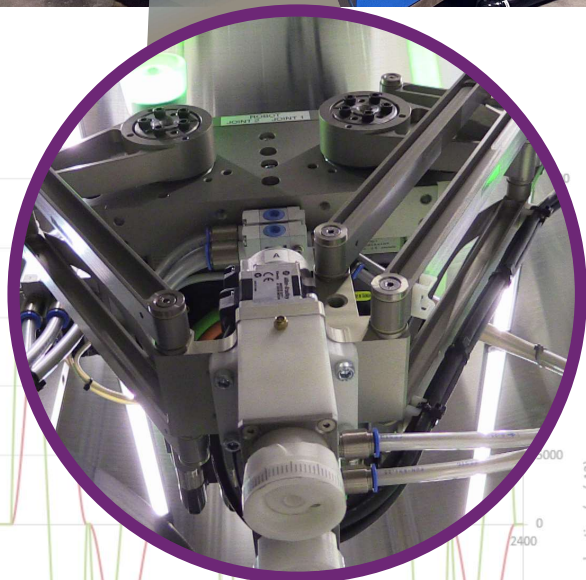

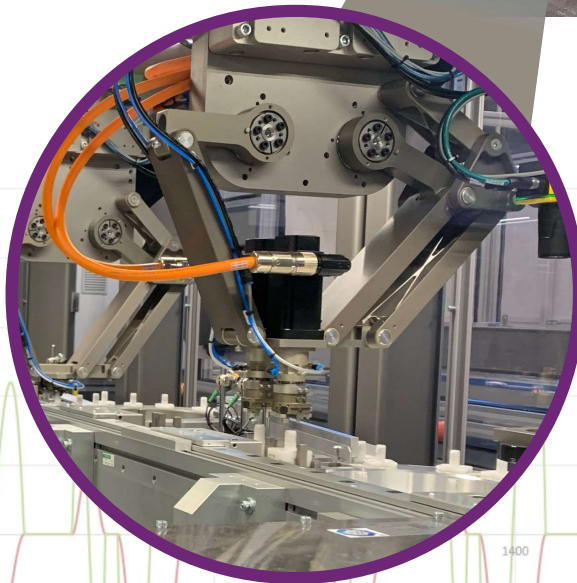

*Symphoni* is an innovative, high-performance digital manufacturing system constructed of standard, self-contained modules.

Fully digital, the *Symphoni* Operating System allows infinite configurability of every motion, each precisely synchronized with other motions, to achieve robust and repeatable processing of one or more products.

Once set, machine speeds can be indexed higher; critical process times are preserved and “non-value-added” movement eliminated.

The result is a fast, precise, and versatile **“Symphony of Motion.”**

## The Best of All Worlds

High throughput and speed of asynchronous and continuous motion machines.

Superior versatility of robotic-based assembly systems.

Robustness of mechanically cammed equipment.

Ultra-precise motion control without payload compromise.

Modular construction for cost effective scalability and easy reconfiguration.

“Off-the-Shelf” proven and pre-validated Control System architecture.

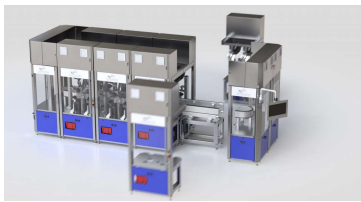

## Symphoni™ Benefits: De-Risk and Win

Configure a single module for process development and validation, then add modules for clinical trials, test marketing, and initial product launch.

As volumes grow, reposition existing modules and add others, scaling up to a fully automated production system.

Adapt once again for higher volumes, addition of new products, or integration with larger systems.

- Is a no compromise, no sacrifice solution that achieves the **optimal balance** of **precision**, **speed**, and **versatility**.
- Will **speed up your product to market** because of the pre-engineered and pre-validated, modular design.
- Delivers **optimized utilization** with **digital change-over** functionality between multiple products on the same equipment.
- Delivers a **greater ROI** with the ability to add capacity as required or be retooled or reconfigured for new products as your business evolves.
- Lowers your Total Cost of Ownership** with simplified training, operation and maintenance.

## Is Symphoni™ Right For You?

- ✓ Frustrated with choosing between fast or versatile assembly systems?
- ✓ Experiencing production delays, long retooling time, and underutilized equipment due to changes in your production schedule, product mix, or product demand?
- ✓ Having to write off a custom assembly machine as the product is no longer viable?
- ✓ Spent months or years, custom engineering an assembly system?
- ✓ Lost business due to late delivery of your assembly machine?

If you have answered

**‘YES’**
